ieMentor - CCIE Voice Workbook v2.0

ieMentor Voice workbook has been a great addition to our other Books portfolio. Our workbook approaches instruction in a logical manner: it starts out with various focus labs gradually increasing in complexity and is topped off with master labs that would test a true voice expert. As with all our other offerings, we've dedicated some of the best brains to come up with a top notch product. We use true subject matter experts in the voice market worldwide to work on our CCIE? Voice technology portfolio. Various contributors to the workbook (including those who hold multi-CCIE? status) are experts in their respective fields and provide the best knowledge transfer in one package. It is difficult to find a subject matter expert in all of the technologies that apply to today's Voice world, so we split these technologies into multiple sections. These sections were created by people who know their specialization to the highest level. We used the same approach in our SP workbook v1.2a and v2.0 SP workbook and received tremendous responses from our customers about both quality and support. We believe knowledge is a true power to success. Anyone can memorize configuration commands, but it does not equate to practical knowledge. We understand that voice technologies can become very complicated and there are many different ways to accomplish the same task. Just trust us and let ieMentor to be your mentor. Once you become our customer, we will guide you every step of the way. Most of our customers were amazed at the support we provided and the wealth of information included in our workbook. By comparison, our competition charges for such ?extras? as support and explanations of solutions, something we believe is an integral part of the learning process and therefore should come with the workbook at no extra cost. We are confident that if you are not an ieMentor customer already, you will become one. **ieMentor CCIE?
