QUESTION 86 Which feature should you enable and configure so session requests addressed to a specific instance can be allocated to different processor resources based on session request properties? A. Resource Governor B. Windows System Resource Manager C. Processor affinity D. I/O affinity Answer: C

QUESTION 87 You are designing two stored procedures named Procedure1 and Procedure2. You identify the following requirements:

- Procedure1 must take a parameter that ensures that multiple rows of data can pass into the stored procedure.
- Procedure2 must use business logic that resides in a Microsoft .NET Framework assembly.

You need to identify the appropriate technology for each stored procedure. Which technologies should you identify? To answer, drag the appropriate technology to the correct stored procedure in the answer area. (Answer choices may be used once, more than once, or not at all.)

Technologies

- Common language runtime (CLR)
- Extensible Markup Language (XML)
- a table-valued parameter (TVP)

Answer Area

- Procedure1
- Procedure2
- Technology
- Technology

Answer:

Technologies

- Common language runtime (CLR)
- Extensible Markup Language (XML)
- a table-valued parameter (TVP)

Answer Area

- Procedure1
- Procedure2
- a table-valued parameter (TVP)
- Common language runtime (CLR)

QUESTION 88 You work as a Database Administrator (DBA) for a company named ABC.com. The company uses a Microsoft SQL Server 2012 infrastructure. The sales and marketing departments contain a total of 60 users. Each user uses a custom application that stores data in a SQL Server database. Each user has a separate database. A server named ABC-SQL1 hosts the 60 databases. You need to configure a backup solution for all the databases. The solution must ensure that any new databases configured on ABC-SQL1 are automatically added to the backup schedule. The backup schedule consists of a full backup every night, a differential backup every hour and a transaction log backup every 15 minutes. How should you configure the backup solution? A. You should configure SQL Server Agent jobs. B. You should configure Change Data Capture. C. You should configure Policy-Based Management. D. You should configure a Maintenance Plan. Answer: D

QUESTION 89 You work as a Database Administrator (DBA) for a company named ABC.com. The company uses a Microsoft SQL Server 2012 infrastructure. You are configuring a highly-available database solution using an AlwaysOn availability group on two servers running SQL Server 2012. The two servers are in separate datacenters. The two datacenters are connected by a fast WAN link with a network latency of less than 10ms. Which of the following failover types should you configure for the availability group? A. You should configure the asynchronous manual failover failover type. B. You should configure the synchronous manual failover

failover type. C. You should configure the synchronous automatic failover failover type.

D. You should configure the Asynchronous automatic failover failover type. Answer: C QUESTION 90 You work as a Database Administrator (DBA) for a company named ABC.com. The company uses a Microsoft SQL Server 2012 infrastructure. You are configuring a highly-available database solution using an AlwaysOn availability group on two servers running SQL Server 2012. The two servers are in separate datacenters. The two datacenters are connected by a WAN link with a network latency of more than 200ms. Which of the following failover types should you configure for the availability group?

A. You should configure the asynchronous manual failover failover type. B. You should configure the synchronous manual failover failover type. C. You should configure the synchronous automatic failover failover type. D. You should configure the Asynchronous automatic failover failover type.

Answer: A QUESTION 91 You work as a Database Administrator (DBA) for a company named ABC.com. The company uses a Microsoft SQL Server 2012 infrastructure. You have a database named CorpDB. A full backup of CorpDB is taken every week. A differential backup of CorpDB is taken every night at midnight. A transaction log backup of CorpDB is taken at 8am, 12pm, 4pm and 8pm. You plan to deploy some changes to CorpDB at after the 4pm log backup completes. You need to ensure that you can undo the changes quickly if the deployment fails. During the deployment of the changes, no other changes must be made by users to the database. You need a backup and recovery strategy for deploying the changes. Which two of the following actions would meet the backup and recovery requirements whilst ensuring the regular backup schedule is not disrupted? (Choose two).

A. Take a full backup of the database before deploying the changes. B. Take a copy-only backup of the database before deploying the changes. C. Take a snapshot of the database before deploying the changes. D. Restore the database from the backup. E. Restore the snapshot to another server and recover the required objects from the snapshot. F. Revert the database to the snapshot. Answer: CF

QUESTION 92 You work as a Database Administrator (DBA) for a company named ABC.com. The company uses a Microsoft SQL Server 2012 infrastructure. You have a database named CorpDB. CorpDB contains 2TB of data. You plan to import a large amount of data into tables in CorpDB. You want to minimize the size of the transaction log while the data is imported. What should you do? A. You should configure the recovery model of the database to Full. B. You should configure the recovery model of the database to Bulk-Logged. C. You should start a new transaction log file. D. You should configure a new filegroup for the existing log file.

Answer: B QUESTION 93 You work as a Database Administrator (DBA) for a company named ABC.com. The company uses a Microsoft SQL Server 2012 infrastructure. You have a database named CorpDB. CorpDB contains a table named SalesInfo. You discover that some table has been deleted from the SalesInfo table. You are unable to find out who deleted the information. You need to implement a solution to monitor the deletion of any further information from the SalesInfo table. You want to minimize the development effort required for the solution. What should you configure? A. You should configure table permissions. B. You should configure a user role. C. You should configure change data capture. D. You should configure a trigger. Answer: C

QUESTION 94 You work as a Database Administrator (DBA) for a company named ABC.com. The company uses a Microsoft SQL Server 2012 infrastructure. You have a database named CorpDB. You plan to create a stored procedure to access data in CorpDB. You need to ensure that the stored procedure supports dirty reads. What should you do? A. You should configure the stored procedure to use the READ UNCOMMITTED isolation level. B. You should configure the stored procedure to use the READ COMMITTED isolation level. C. You should configure the stored procedure to use the READ SERIALIZABLE isolation level. D. You should configure the stored procedure to use the REPEATABLE READ isolation level. E. You should configure the stored procedure to use the SNAPSHOT isolation level.

Answer: A QUESTION 95 You work as a Developer at ABC.com. All databases are hosted on Windows Server 2012 servers running SQL Server 2012. The company has a database named Products. Tables in the Products database contain data including part numbers, product name, color, type and size. Users in the Marketing department have created brochures for each product. The brochures have been created in the XML Paper Specification (XPS) format. You have been asked to add a table to the Products database to store the product brochures. The brochures need to be stored in a folder structure. Company users will also need to access the brochures from Windows applications using UNC paths. How can you meet these requirements?

A. By implementing the XMLNAMESPACES feature. B. By implementing the FILEGROUP feature. C. By implementing the FILETABLE feature. D. By implementing the FILESTREAM feature. Answer: C

<http://www.passleader.com/70-465.html> QUESTION 96 You work as a Developer at ABC.com. All databases are hosted on Windows Server 2012 servers running SQL Server 2012. You are developing a custom CRM application named CorpCRM. The application will store usernames and passwords in a SQL Server 2012 database named CorpCRMDB1. You need to ensure the usernames and passwords are secure. Which of the following would be most suitable password storage solution?
 A. One-way encryption B. Reversible encryption C. Encrypting File System (EFS) D. Secure Sockets Layer (SSL) Answer: A QUESTION 97 You need to ensure that a stored procedure fails if an INSERT statement within the stored procedure fails. What action should you take?
 A. THROW 51000, 'Abort!' B. SET XACT_ABORT OFF C. SET XACT_ABORT ON D. TRY...CATCH Answer: C QUESTION 98 You need to grant access to a OLTP database regardless of the user operating the application. Which strategy should you use? Select the BEST answer.
 A. Application role B. Database user C. Server login D. Server role Answer: A QUESTION 99 You use a contained database named ContosoDb within a domain. You need to create a user who can log on to the ContosoDb database. You also need to ensure that you can port the database to different database servers within the domain without additional user account configurations. Which type of user should you create?
 A. User mapped to a certificate B. SQL user without login C. Domain user D. SQL user with login Answer: C QUESTION 100 You administer a Microsoft SQL Server 2012 database that has multiple tables in the Sales schema. Some users must be prevented from deleting records in any of the tables in the Sales schema. You need to manage users who are prevented from deleting records in the Sales schema. You need to achieve this goal by using the minimum amount of administrative effort. What should you do?
 A. Create a custom database role that includes the users. Deny Delete permissions on the Sales schema for the custom database role. B. Include the Sales schema as an owned schema for the db_denydatawriter role. Add the users to the db_denydatawriter role. C. Deny Delete permissions on each table in the Sales schema for each user. D. Create a custom database role that includes the users. Deny Delete permissions on each table in the Sales schema for the custom database role. Answer: A QUESTION 101 You create a stored procedure that retrieves all of the rows from a table named Table1. You need to recommend a solution to ensure that all of the statements in the stored procedure can be executed if another transaction is modifying rows in Table1 simultaneously. What should you recommend?
 A. Snapshot isolation B. A database snapshot C. Filegroups D. Indexes Answer: A QUESTION 102 You have a SQL Server instance on a server named Server1. You need to recommend a solution to perform the following tasks every week: - Rebuild the indexes by using a new fill factor. - Run a custom T-SQL command. - Back up the databases. What should you recommend? More than one answer choice may achieve the goal. Select the BEST answer.
 A. A trigger B. An alert C. A maintenance plan D. Windows PowerShell E. A system policy Answer: C QUESTION 103 You are the lead database administrator (DBA) of a Microsoft SQL Server 2012 environment. All DBAs are members of the DOMAINJrDBAs Active Directory group. You grant DOMAINJrDBAs access to the SQL Server. You need to create a server role named SpecialDBARole that can perform the following functions: - View all databases. - View the server state. - Assign GRANT, DENY, and REVOKE permissions on logins. You need to add DOMAINJrDBAs to the server role. You also need to provide the least level of privileges necessary. Which SQL statement or statements should you use? Choose all that apply.
 A. CREATE SERVER ROLE [SpecialDBARole] AUTHORIZATION setupadmin; B. ALTER SERVER ROLE [SpecialDBARole] ADD MEMBER [DOMAINJrDBAs]; C. CREATE SERVER ROLE [SpecialDBARole] AUTHORIZATION securityadmin; D. GRANT VIEW DEFINITION TO [SpecialDBARole]; E. CREATE SERVER ROLE [SpecialDBARole] AUTHORIZATION serveradmin; F. GRANT VIEW SERVER STATE, VIEW

ANY DATABASE TO [SpecialDBARole]; Answer: BCF QUESTION 104 You create an availability group that has replicas named HA/Server01 and HA/Server02. Currently, HA/Server01 is the primary replica. You have multiple queries that read data and produce reports from the database. You need to offload the reporting workload to the secondary replica when HA/Server01 is the primary replica. What should you do? A. Set the Availability Mode property of HA/Server02 to Asynchronous commit. B. Set the Readable Secondary property of HA/Server02 to Read-intent only. C. Set the Connections in Primary Role property of HA/Server01 to Allow read/write connections. D. Set the Availability Mode property of HA/Server01 to Asynchronous commit. Answer: B QUESTION 105 You administer two Microsoft SQL Server 2012 servers. Each server resides in a different, untrusted domain. You plan to configure database mirroring. You need to be able to create database mirroring endpoints on both servers. What should you do? A. Configure the SQL Server service account to use Network Service. B. Use a server certificate. C. Use a database certificate. D. Configure the SQL Server service account to use Local System. Answer: B
