QUESTION 31 A company has an Active Directory Domain Services (AD DS) domain. All client computers run Windows 8. You need to minimize the amount of Trusted Platform Module (TPM) authorization information that is stored in the registry. What should you do? A. Enable Platform Configuration Register indices (PCRs) 0, 2, 4, and 11 for the Configure TPM validation profile for native UEFI firmware configuration policy setting. B. Create a Group Policy object (GPO) that disables the Configure the level of TPM owner authorization information available to operating system policy setting. C. Create a Group Policy object (GPO) that sets the Configure the level of TPM owner authorization information available to operating system policy setting to None. D. Create a Group Policy object (GPO) that enables the Turn on TPM Local Encryption policy setting. Answer: C

QUESTION 32 A company has an Active Directory Domain Services (AD DS) domain. All client computers run Windows 8 and are joined to the domain. You have the following requirements:

- Ensure that files in shared network folders are available offline.
- Minimize all data access times.
- Reduce network bandwidth usage.

You need to configure Group Policy settings to meet the requirements. What should you do first? A. Enable the Enable file synchronization on costed networks policy setting. B. Enable and configure the Configure slow-link mode policy setting. C. Enable and configure the specify administratively assigned Offline Files policy setting. D. Enable the Synchronize all offline files when logging on policy setting. Answer: B

QUESTION 33 A company has an Active Directory Domain Services (AD DS) domain. All client computers run Windows 8 and are joined to the domain. You have the following requirements:

- Ensure that files in shared network folders are available offline.
- Maximize efficiency for users who connect to shared network folders from a mobile device.

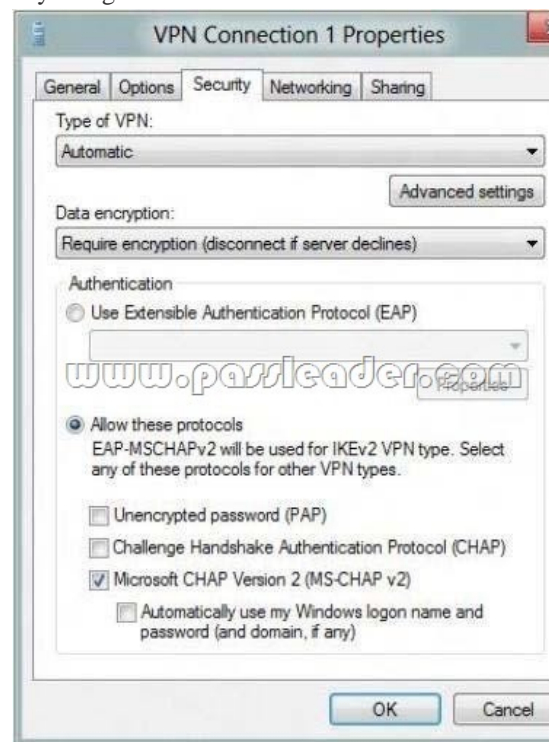

You need to configure Group Policy settings to meet the requirements. What should you do first? A. Enable and configure the Configure slow-link mode policy setting. B. Enable the Enable file synchronization on costed networks policy setting. C. Enable the Synchronize all offline files when logging on policy setting. D. Enable and configure the Specify administratively assigned Offline Files policy setting. Answer: B

QUESTION 34 A company has a main office and several branch offices. The company has an Active Directory Domain Services (AD DS) domain. All client computers run Windows 8. All printers are deployed to all client computers by using Group Policy. When a user attempts to print from his portable client computer while at a branch office, the main office printer is set as his default printer. You need to ensure that a location-specific default printer for each branch office is set for the user. What should you do? A. Create a Group Policy object (GPO) that enables the Computer location policy setting. B. In the Manage Default Printers dialog box, select the Always use the same printer as my default printer option. C. In the Manage Default Printers dialog box, select the Change my default printer when I change networks option. D. Create a Group Policy object (GPO) that enables the Allow Print Spooler to accept client connections policy setting. Answer: C

QUESTION 35 A computer runs Windows 8. You install an application by running an .msi file. You need to apply a patch to the application. Which command should you run? A. `dism /Online /add-package:C:\MyPatch.msp` B. `dism /get-AppPatches /get-PackageInfo:C:\MyPatch.msp` C. `msiexec /x "C:\MyPatch.msp"` D. `msiexec /p "C:\MyPatch.msp"` Answer: D

QUESTION 36 A company has client computers that run Windows 8. Users can run applications that have been downloaded from the Internet only with administrator approval. You need to ensure that users can run downloaded applications without administrator

approval. What should you do? A. Set the Internet zone privacy level to Low. B. Set the Internet zone security level to Medium. C. Set the User Account Control (UAC) settings to Never notify. D. Turn off Windows SmartScreen. Answer: A QUESTION 37 You manage computers that run Windows 8. You plan to install a desktop app named MarketingApp on one of the client computers. You need to display a progress bar to the user while installing the app. Which command should you run? A. msixexec /i marketingapp.msi /qn B. msixexec /i marketingapp.msi /qb C. msixexec /x marketingapp.msi /qb D. msixexec /x marketingapp.msi /qn Answer: B QUESTION 38 A company has client computers that run Windows 8. You set up new virtual private network (VPN) connections on all client computers. The VPN connections require the use of a smart card for authentication. Users are unable to connect to the corporate network by using the VPN connections. The connection properties are configured as shown in the exhibit. (Click the Exhibit button.)

You need to ensure that the client computers can connect to the corporate network. What should you do? A. Enable Challenge Handshake Authentication Protocol (CHAP). B. Change the VPN type to IKEv2. C. In the advanced settings, select Use preshared key for authentication. D. Change the authentication setting to Use Extensible Authentication Protocol (EAP). Answer: D QUESTION 39 You update the video card driver on a portable computer that runs Windows 8. When a user connects the portable computer to an external monitor, the external monitor duplicates the display on the portable computer screen. You need to ensure that the user can display additional desktop space on the external monitor. What should you do? A. Run the DisplaySwitch /extend command. B. Start the computer from the Windows 8 installation media and perform a system image recovery. C. Roll back the video card driver to the previous version. D. Run the sic /scannow command. Answer: A QUESTION 40 A company has client computers that run Windows 8. You attempt to roll back a driver for a specific device on a client computer. The Roll Back Driver button is unavailable in Device Manager. You need to roll back the driver to the previous version. What should you do first? A. In the system properties for hardware, modify the device installation settings. B. Disable driver signature enforcement. C. In the local Group Policy, modify the device installation restrictions. D. Run Device Manager as an Administrator. Answer: D

<http://www.passleader.com/70-689.html> QUESTION 41 You update the video card driver on a computer that runs Windows 8. You can no longer configure the display settings to extend the display to a projector. You need to restore the display options as quickly as possible and retain all user data. What should you do? A. Roll back the video card driver to the previous version. B. Run the DisplaySwitch/extend command. C. Run the sc /scannow command. D. start the computer from the Windows 8 installation media and perform a system image recovery. Answer: A QUESTION 42 A company has client computers that run Windows 8. Each computer has two hard drives. You need to create a dynamic volume on each computer that maximizes write performance. Which kind of dynamic volume should you create? A. Striped volume B. RAID 5 volume C. Spanned volume D. Mirrored volume Answer: A QUESTION 43 A company has client computers that run Windows 8. The corporate network is configured for IPv4 and IPv6. You need to disable Media Sensing for IPv6 on the client computers without affecting IPv4 communications. What should you do on each client computer? A. Run the Disable-NetAdapterBinding Windows PowerShell cmdlet. B. Run the Disable-NetAdapter Windows PowerShell cmdlet. C. Run the Set-NetIPv6Protocol Windows PowerShell cmdlet. D. Run the Set-NetIPv4Protocol Windows PowerShell cmdlet. Answer: C QUESTION 44 A company has 100 client computers that run Windows 8. The client computers are members of a workgroup. A custom application requires a Windows Firewall exception on each client computer. You need to configure the exception on the client computers without affecting existing firewall settings. Which Windows PowerShell cmdlet should you run on each client computer? A. New-NetFirewallRule B. Set-NetFirewallSetting C. Set-NetFirewallRule D. Set-NetFirewallProfile E. New-NetIPSecMainModeRule Answer: A QUESTION 45 A company has an Active Directory Domain Services (AD DS) domain. All client computers run Windows 8 and are members of the domain. Client computers maintain a list of sites in the Internet Explorer Restricted Sites security zone. Users of one client computer are able to download and install an application from a site within the Restricted Sites zone. You need to ensure that users of the computer can install applications only from sites that are not in the Restricted Sites zone. What should you do? A. Run the Set-ExecutionPolicy Windows PowerShell cmdlet. B. Configure the Software Restriction Policy settings in the local Group Policy of the computer. C. Add the blocked application as a software restriction policy to the GPO that configures AppLocker. D. Run the Set-AppLockerPolicy Windows PowerShell cmdlet. E. Add the blocked application as an additional AppLocker rule to the GPO that configures AppLocker. Answer: B QUESTION 46 A company has an Active Directory Domain Services (AD DS) domain. All client computers run Windows 8. A local printer is shared from a client computer. The client computer user is a member of the Sales AD security group. You need to ensure that members of the Sales security group can modify the order of documents in the print queue, but not delete the printer share. Which permission should you grant to the Sales group? A. Manage queue B. Manage this printer C. Print D. Manage spooler E. Manage documents Answer: E QUESTION 47 Your computer runs Windows 8 and is connected to an Active Directory Domain Services (AD DS) domain. You create a folder and share the folder with everyone in your organization. You need to modify the NTFS permissions of the folder to meet the following criteria:

- Users from the Marketing security group must be able to open files, but not modify them.
- Users from the Supervisors security group must be able to create, modify, and delete files.

Which permissions should you set? Users from both groups must not be able to delete the folder. A. Assign the Marketing group the Read permission. Assign the Supervisors group the Read and Write permissions and the Delete Subfolders and Files special permission. B. Assign the Marketing group the Read and Write permissions. Assign the Supervisors group the Full Control permission. C. Assign the Marketing group the Read and Write permissions. Assign the Supervisors group the Modify permission and the Delete Subfolders and Files special permission. D. Assign the Marketing group the Read permission. Assign the Supervisors group the Read and Write permissions and the Delete special permission. Answer: A QUESTION 48 A company has client computers that run Windows 8. The company implements the following security requirements:

- All client computers must use two-factor authentication.
- At least one authentication method must include exactly four characters or gestures.

You need to choose authentication methods that comply with the security requirements. Which two authentication methods should you choose? (Each correct answer presents part of the solution. Choose two.) A. PIN B. Biometric authentication C. Picture password D. Microsoft account Answer: AB QUESTION 49 A company has client computers that run Windows 8. The company implements the following security requirements:

- All client computers must use two-factor authentication.
- At

least one authentication method must include more than four characters or gestures. You need to choose authentication methods that comply with the security requirements. Which two authentication methods should you choose? (Each correct answer presents part of the solution. Choose two.) A. PIN B. Biometric authentication C. Picture Password D. Microsoft Account Answer: BD

QUESTION 50 Your computer runs Windows 8 and is connected to an Active Directory Domain Services (AD DS) domain. You create a folder and share the folder with everyone in your organization. You need to modify the NTFS permissions of the folder to meet the following criteria:

- Users from the Supervisors AD security group must be able to open files, but not modify them.
- Users from the Marketing AD security group must be able to create, modify, and delete files.
- Users from both groups must not be able to delete the folder.

Which permissions should you set? A. Assign the Supervisors group the Read and Write permissions. Assign the Marketing group the Modify permission and the Delete Subfolders and Files special permission. B. Assign the Supervisors group the Read and Write permissions. Assign the Marketing group the Full Control permission. C. Assign the supervisors group the Read permission. Assign the Marketing group the Read and Write permissions and the Delete Subfolders and Files special permission. D. Assign the Supervisors group the Read permission. Assign the Marketing group the Read and Write permissions and the Delete special permission. Answer: C
