You also verify that all of mailbox databases on EX1 are mounted. Delete 20 GB of unnecessary data on EX1. You discover that the hard disk drive on EX1 has only 10 GB of free space. You delete 20 GB of unnecessary data on EX1. Users report that now they are receiving all of their email messages successfully to their mailbox. You need to ensure that EX1 will prevent the delivery of email messages to mailboxes only if less than 2 GB of hard disk space is available. What should you do? A.   Modify the Organization transport settings.   B.   Disable the Safety Net feature. C.   Modify the EdgeTransportexe.config file.   D.   Modify the mailbox database settings.   **Answer: D NEW QUESTION 221**   Hotspot Question   You have an Exchange Server 2013 organization. Each data center contains several Exchange servers and connects directly to the Internet. Each office has a Send connector to the Internet. You configure each office as a separate site and you configure Main1 as a hub site. The company opens a branch office that contains a small data center. You deploy an Exchange Server 2013 server to the data center. The data center has a direct network link to Main1. All of the site link costs are set to the default values. In the table below identify through which office the email message will be transmitted first for each scenario.

Scenario	Through Main1	Through Main2
A user in the branch office sends an email message to a recipient in Main1.	◉	○
A user in the branch office sends an email message to the Internet.	◉	○
A user in the branch office sends an email message to a recipient in Main2.	◉	○

Answer: See full version from http://www.passleader.com/70-341.html NEW QUESTION 222   You have an Exchange Server 2013 organization that contains three Client Access servers named EX1, EX2, and EX3. The organization also contains eight Mailbox servers. All users have client computers that have Microsoft Outlook 2013 installed. You create a Network Load Balancing (NLB) cluster and add all of the Client Access servers as hosts in the cluster. The cluster has the following configurations: - The default host is set to EX1.   - A port rule is configured for HTTPS traffic.   - The port rule has the affinity parameter set to Single.   - The port rule has the filtering mode set to Single host.   The port rule has the Handling priority set to the default option. You discover that Outlook always connects to EX1. You need to ensure that client connection are handled by all three Client Access servers. What should you modify? A.   the filtering mode of the port rule.   B.   the affinity parameter of the port rule.   C.   the handling priority of the port rule.   D.   the default host of the cluster. **Answer: C NEW QUESTION 223**   ......
